

## Cooperation with professional schools

Measure by	West-Vlaamse Intercommunale, Belgium
Coverage	Local area of "De Vloei", Ieper
Measure type(s)	Consult / Co-produce
Contact	<a href="http://www.sieuu.info">www.sieuu.info</a>

### Description and Aim

Two professional schools worked together with the city of Ieper and wvi. One of the schools made demonstration models for insulation of walls for low energy and passive houses, the other school made a light plan for the new quarter.

#### Aim:

Change knowledge – change attitude – change behaviour  
Directors, educators and pupils realized that the school programmes can focus more on sustainability than they do at this very moment.

### Target group(s), Message, Instruments

#### Target group(s):

Population: age groups, young people  
Professionals: professional schools  
It were the youngsters that did the work and made YouTube movies and websites concerning their assignment.

The professional schools in Ieper realize through this cooperation that sustainability should become more present in the school programmes.

#### Message:

Raise awareness for sustainable construction and quarter development.

#### Used instruments:

Opinion – emotion – facts

### Experiences

#### Combination with other measure:

Structural fact sheets: Urban planning, Ambition note for "De Vloei"

#### Follow up:

One of the schools continued working with the city of Ieper and the social housing company to make a refurbishment plan for an old farm in the De Vloei site.

Light plan that can be used if more worked out in detail -  
The insulation models are now used by the city of Ieper for raising awareness for sustainable construction.

#### Costs:

Only staff costs which were little as wvi only had to explain to the schools what the De Vloei partners wanted as result.
